

# Full\_stack\_2

1. Where to use this Interface?

```
1 export interface ApiRequest {  
2   task: string,  
3   payload: number  
4 }  
5
```

2. Were there other options how to download a file or read its content that was sent as a request?

```
14 const fileStorageEngine = multer.diskStorage({  
15   destination: (req, file, callback) => {  
16     callback(null, './files');  
17   },  
18   filename: (req, file, callback) => {  
19     callback(null, 'iris.json');  
20     // callback(null, Date.now() + '_' + file.originalname);  
21   }  
22 });  
23  
24 const upload = multer({ storage: fileStorageEngine });  
25  
26 app.post('/upload', 1, 2, 3, ...upload.single('iris'), (req, res) => { // for uploading  
27   console.log('Successfully sent. Redirecting to /calculate_stats ...');  
28   res.redirect('/calculate_stats');  
29 })
```

3. Theoretically I could create this structure for each species but it wont be optimal solution (upload/:species)
